SPRING/SUMMER 2024

Problem

Southern Scottsdale residents face higher temperatures in the summer, nearly 10°F warmer due to more concrete and fewer trees, compared to the rest of the city.

Solution

To help address this, Unlimited Potential's CHW's and the City of Scottsdale held community conversations in April 2024 and follow-up meetings in June 2024, with residents from the Paiute and Vista Del Camino neighborhoods. Residents discussed their experiences during the record-breaking heat of 2023, strategies for managing the summer of 2024, and solutions for a cooler future.

What's Next

A newly formed focus group and an upcoming series of education sessions based on community feedback will continue to engage and energize community members. The City of Scottsdale team and interested community members will continue to work on the recommended solutions and report out their results as of January 2025.
